

How to use Fonts, Colors, Styles

Background

Diagram and table shades on Deep Blue

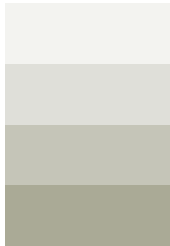

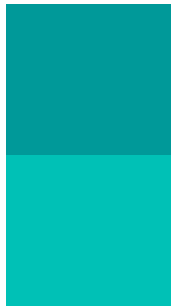

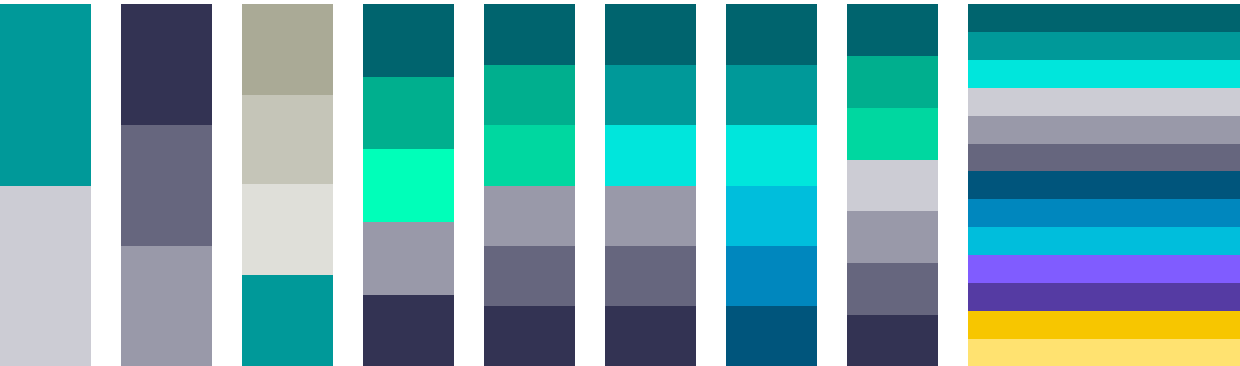

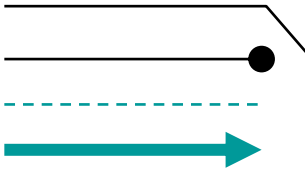

Diagram and table shades on white

Primarily used accents, Light is used on Dark and Siemens Petrol is used on Light

Arial Bold

Arial Regular

Sequences

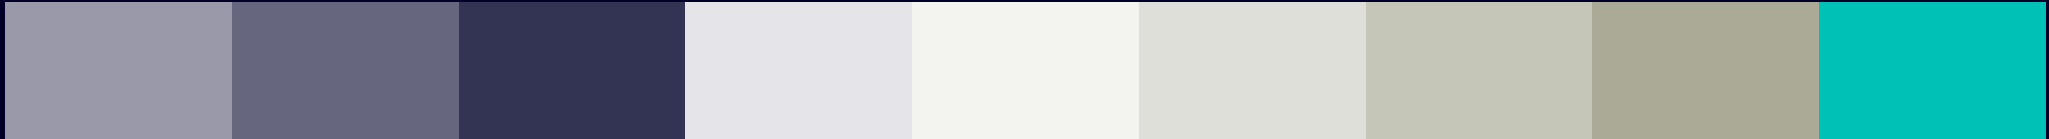

The key design elements include:

- White and Deep Blue as the primary background color for slides
- Siemens Petrol (Siemens Light Petrol on Deep Blue), Siemens strongest brand asset is used sparingly within the business graphics, to call attention and to emphasize
- Diagram and table backgrounds are colored in gray shades on Deep Blue and in Sand shades on bright background colors
- Lines should have a continuous thickness of 1pt and be colored in black or white. The only exception would be longer tabular documents (f. ex. p9).
- Color sequences based on Siemens Petrol and our secondary colors can be used to color graphics.
- However, the purple and yellow tones should be used in special cases, and if they are used, yellow must be preferred to purple.
- Limited font styles (Arial Bold/Arial Regular) and font sizes (20pt, 18pt, 16pt, 14pt, and 12pt)
- No use of additional PowerPoint generated 3D effects
- Aim for Level AA contrast by using color combinations shown in this document.

Simple three-shades combinations

Combinations extended with accent color (Light Petrol)

A full spectrum of secondary colors for highly complex diagrams

Add-ons if needed

Simple three-shades combinations

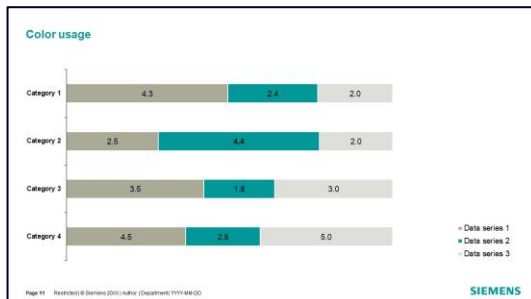

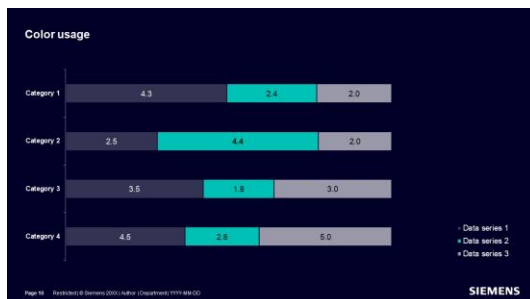

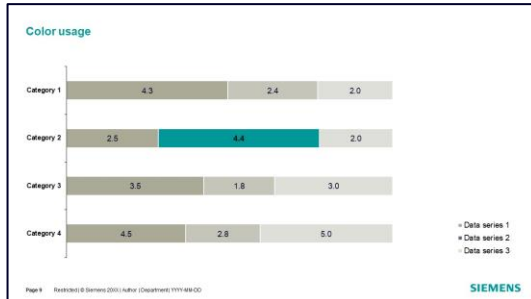

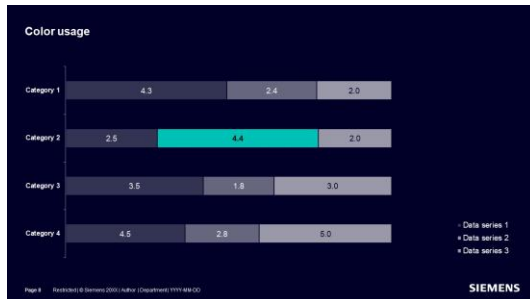

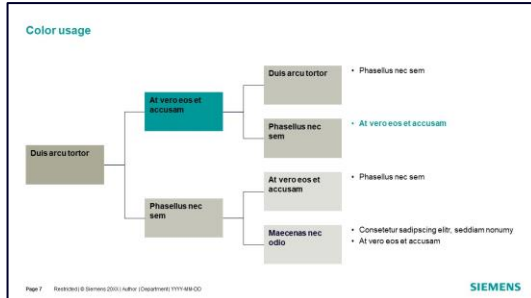

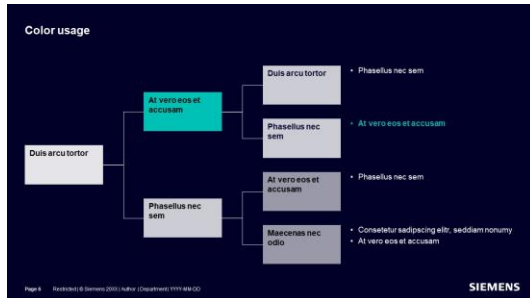

Combinations extended with accent color (Petrol)

Overview

Application examples

This deck includes:

- This template features pages with dark and light appearances.
- Our primary look for the brand is our dark appearance. The light appearance is recommended if text-heavy slides are needed to ensure legibility or to structure a presentation.
- There are three color gradations in the dark slides: Deep Blue 80%, 60% and 40%.
- For Deep Blue backgrounds up to 40% the typography is Black, beyond that it is White.
- For Sand backgrounds the typography is Black.
- Special Headlines and information are emphasized with the appropriate petrol shade.
- Secondary information that is not relevant to the current slide can be colored in 40% dark blue (see f. ex. slide 63/64).
- The light slides have three sand gradations: Dark Sand, Soft Sand and Bright Sand
- Siemens Petrol is used full surface on light backgrounds.
- Light Petrol is used full surface on dark backgrounds.
- This deck uses the line widths 1pt, 1.75pt and 3pt (1pt tables, 1.75pt levels within a graphic, 3pt clear separation of segments).
